Complete solution for security, protection and comfort

JABLOTRON

# Security, protection and comfort

JABLOTRON systems can alert you of possible break-ins (windows or doors opening, breaking of glass panels, movement of people inside the building).

They can also detect imminent danger in the form of fire (appearance of smoke, increase in temperature), flood or gas leak.

Furthermore, they offer smart automation features to make your life easier. Lighting, heating, irrigation, etc., can be controlled remotely.

4 steps to security

1.
High-quality alarm

We have been developing and innovating security systems for more than 30 years.

2.
Professional installation

Our certified installation partners will provide you with comprehensive services.

3.
Monitoring 24 hours a day

Connecting the security system to a professional Alarm Receiving Centre offers you 24/7 surveillance.

4.
Action in case of an alarm

If anything happens, you will be contacted by our operators who can send a special response unit.

Residential and commercial solution

Our systems include a wide range of optional components and accessories. These offer a complete modern security solution for homes and small to medium-sized businesses.

Control options

JABLOTRON systems offer several control options that can be selected according to the preferences of individual users. All methods are intuitive, so everyone will quickly become familiar with its use.
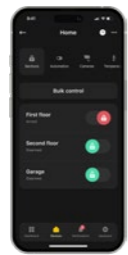

The system uses traffic light logic:　🟢 DISARMED　🔴 ARMED

| Keypad | MyJABLOTRON application | Remote control | RFID card / tag |

Professional installation

Our professional security systems are designed and installed by specialists. Our certified installation partners will provide you with comprehensive services including subsequent inspections. This guarantees reliable and efficient operation of the system for your peace of mind and security.

Wired or wireless

JABLOTRON systems can be installed in several ways. In completed and furnished buildings, wireless installation is carried out. This method is friendly to the interior and does not require any construction modifications.

In new and refurbished buildings, installation is usually performed using a combination of wired and wireless methods.
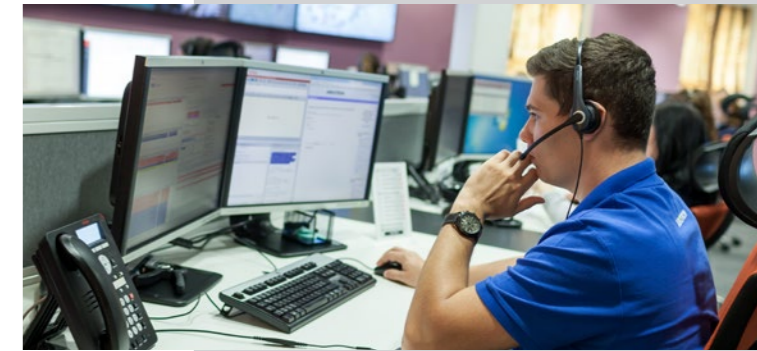

# ARC (Alarm Receiving Centre)

Connecting the security system to a professional ARC offers you 24/7 surveillance.

If anything happens, you will be contacted by operators and they will send a response unit.

# MyJABLOTRON application

Alarm control

Device control

Important information

Notification of events

Designed for smartphones (iOS or Android). Allows you to control and check the alarm from anywhere.

Thanks to push notifications, emails or SMS, you will receive every alert immediately. In the application, you can view current information, event history and alarm photos.

Security system components

Keypads

Arm and disarm the alarm system. The property can be guarded as a whole or can be divided into independent sections. Multiple keypads can be installed for more convenient control.

Complete overview of JABLOTRON systems components and accessories

Control panels

Manage and control all peripherals and maintain a permanent data connection with the monitoring centre. They have a built-in backup power supply to keep the alarm working in the event of a power outage.

Opening detectors

Guard windows and doors: if they are opened violently, they will trigger an alarm.

Flood, fire and gas protection

The system will not only protect your home from intrusion, it will also notify you of imminent danger, e.g. fire, gas or water leaks.

Motion detectors

Recognizes the movement of people in the guarded area. The PET suffix is used to indicate a version that is immune to movement of smaller animals.

In addition to the alarm notification, photo-verification motion detectors send photos of the guarded area.

Combined and dual motion detectors reliably identify and verify alarms using glass break or microwave detection, thus providing a high resistance to false alarms.

Sirens

Acoustically signal alarms. Their installation in a visible place also alerts everyone that the building is guarded by a security system.

In addition to acoustic alarm signalling, internal sirens can also fulfill the function of a doorbell.

Automation

Using PG outputs, it is possible to control lighting, socket circuits, blinds, garage doors or lawn irrigation.

Thermostats and thermometers

Measure and control temperature in each room separately, according to the specified programs. These can be controlled and set in the MyJABLOTRON application. Allow to control the heating when the limit value is reached.

About us

JABLOTRON is a leading European producer of high quality alarm systems with an emphasis on the user comfort of our products for over 30 years. We provide state-of-the-art solutions for the protection of property, health and the safety of our customers.

Certification and extended service support

EN 50131

Our systems comply with the EN 50131 European standard and Grade 2 security level.

2 GRADE

This certification guarantees reliability and robustness (accuracy of detection and resistance to sabotage).

2+5 YEARS

In addition to the two-year warranty, we offer up to 5 years of extended service support for all products.
