MES SAM 9160

POLITEC

MES SAM 9160

Περιγραφή

The photo-devices with pulse and synchronized infrared beams create an invisible and discreet barrier, because fastened to an aluminum structure placed inside the polycarbonate body with standard diameter for sustenance of the lighting bodies. In fact, thanks to the different types of sealing covers, it is possible to finish off the poles with the various models of lighting bodies available on the market. This and other special characteristics have rendered the product patented on a European level. The electronics allow to discriminate at onset the passage of small animals; alternatively, it is possible to command the exclusion of the first two rays at a distance (alarm control unit). The number of double TX and RX beams, their rotation by 180° horizontally and by 20° vertically, placed in a single column, allow to achieve protection, following any type of geometric shape of the site.

Τεχνικά Χαρακτηριστικά προϊόντος*

Maximum internal distance of use	400 m
Maximum external distance of use	100 m
Synchronization	Wire
Optical lens with dual beam	YES with 35 mm in AND lenses
Photo devices	Pulsed beams, working wave 950 NM
Maximum double beam configuration inside column	4TX + 4RX
Beam arrangement	Parallel
Circuit power supply	13,8 Vcc
Circuit absorption	From 135 to 150 mA per column, based on the number of beams housed
Heater absorption	24 Vac
Thermostat heater absorption	From 30 to 50W per column, based on the number of beams housed
Operating temperature	from -25 to +65° C
Alarm outputs	Relay with NC/NO free contacts
Tamper protection output	Column opening tamper protection
Environmental disqualification from fog	YES with special OC output (signal attenuation at 90%)
Beam anti-masking	YES with special OC output
RS 485 serial output	NO
Degree of protection	IP 54
Pole size Diam. xH	80mm x from 1200 to 4000 mm
