UBIQUITI UNIFI CLOUD KEY

Περιγραφή

UniFi Cloud Key (UC-CK)

The UniFi Cloud Key is an integrated computer and software controller minus the bulk. It features a quad-core processor with 1 GB RAM, operating the latest version of the UniFi Controller with built-in hybrid cloud technology. The UniFi Cloud Key is fully capable of configuring and managing dozens of UniFi devices in your deployment. Replacing a dedicated server or computer, the UniFi Cloud Key is an ultra-low energy solution with virtually no footprint. The Ubiquiti hybrid cloud configuration provides a secure, private SSO (Single Sign-On) to access all of your UniFi deployments from anywhere in the world. With the Ubiquiti hybrid cloud, a third-party hosted cloud service is not required, so all of your personal data and network information remains local and secure - the way it should be. Add, provision, configure, monitor, and manage all of your UniFi devices, whether in one or thousands of private networks - all from a central control plane. Easily accessible through any standard web browser, the UniFi Cloud Key is a powerful solution for managing your UniFi networks across the campus or across the globe.
