IROUTER AUTHENTICATION SERVICES

ISNET

AUTHENTICATION SERVICES

Περιγραφή

Our unique multi-factor authentication (MFA) solution not only helps to reduce the likelihood of network disruptions and data breaches arising from lost or stolen credentials, but we deliver this important capability entirely from the Cloud for easy set-up and management. AuthPoint goes beyond traditional 2-factor authentication (2FA) by considering innovative ways to positively identify users, and our large ecosystem of 3rd party integrations means that you can use MFA to protect access to the network, VPNs, and Cloud applications. Even non-technical users find the AuthPoint mobile app easy and convenient to use!
