## SHUTTER IN-WALL TRANSMITTER RTS SOMFY

IN-WALL TRANSMITTER RTS

### Περιγραφή

Miniature RTS radio transmitter for controlling roller shutters with RTS drives or radio receivers using a standard roller shutter switch. The ideal solution for automating roller shutters.

#### FEATURES:

Practical, micro transmitter allows you to transform any switch into a wireless control point

Ultra-compact, easily fits behind the switch in the electrical box

Universal, compatible with any roller shutter switch available on the market (with and without latching) and maintains its operating mode. In this way, the user has the right to choose and use the same range of switches in the same brand and the same model of transmitter for roller shutters as for other electrical devices in the house (same range of switches)

Low voltage installation, powered by a 3V battery and directly connected to the switch

No wiring, possibility of easily adding one or more control points without drilling holes or grooves, thus avoiding damage to plasters and interior walls

Compatible with RTS radio motors and receivers

Cannot be used to set end positions

Power supply: 3V - CR2430 battery

Frequency: 433.42 MHz

Range: 20 m through two reinforced concrete walls, depending on the environment
